DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-8, drawn to apparatus, classified in class 83 subclass 469.
 - II. Claims 19-31, drawn to a method, classified in class 83, subclass 56.
 - III. Claims 32 and 33, drawn to a method, classified in class 83, subclass 39.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case, Invention II performs a method that includes stabilizing the product during the slitting step. Since Invention I does not disclose a stabilizing means, Invention I must be able to perform a method that does not stabilize the product during the slitting step.
3. Inventions I and III are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case, Invention III performs a method that includes a second slitting step. Since Invention I does not disclose performing a separate second slitting

Art Unit: 3724

step, Invention I must be able to perform a method that incorporates one slitting step that slits the work piece into strips.

4. Inventions II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. For example, the stabilizing step of group II could be employed without the second slitting step as in group III, and conversely, the second slitting step of group III could be employed without the stabilizing step of group II. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
